

PolyTack Mat Frame

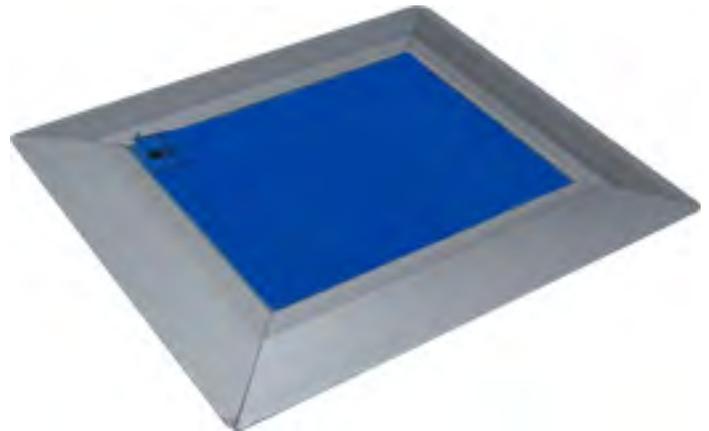

Aluminum

Aluminum Mat Frames

Mat Frames are composed of anodized aluminum perimeter. The aluminum provides a 3" sloped border for comfortable movement of people and product over the frame. The rigid plastic center is made of a special polymer that will hold the mats securely, yet allows for easy removal of the last sheet without leaving any residue behind. Both materials are inert and non-contaminating. The frame base has a laminated non-skid backing that prevents movement. Low 3/16" profile prevents tripping. Frame can be picked up to allow for floor cleaning and placed back down once floor is dry.

Applications include:

- Entrances to clean rooms
- Laboratories
- Offices
- Hospitals
- Darkrooms
- Plate-making rooms
- Construction areas
- Manufacturing sites
